Epidemiological comments

Article 2.7.12.4. of the OIE Terrestrial Animal Health Code states that a country may regain its status as an avian influenza-free country 90 days after "a stamping-out policy (including disinfection of all affected establishments) is applied, providing that surveillance in accordance with Appendix 3.8.9. has been carried out during that three-month period".

The last culling and disinfection were completed on 1 July 2006. Since then, clinical and virological surveillance, conducted intensively nation-wide, have found no positive cases of highly pathogenic avian influenza. Ninety days after this date, no cases have been confirmed positive for highly pathogenic avian influenza. The event is considered resolved. Romania therefore declares having regained its status as a highly pathogenic avian influenza-free country on 1 October 2006.
