Epidemiology

Epidemiological comments
Active surveillance was conducted in a 5-km-radius zone around the infected farm. During the active surveillance, no new cases were observed. In addition to clinical observation, 192 sera and 152 cloacal swabs were collected from healthy poultry within this zone and submitted to the laboratory for testing. The test results revealed that all samples were negative for avian influenza. On 27 May 2010, the surveillance zone was lifted. Restocking is still on the standstill and under supervision of the veterinary authority.
