Epidemiology

Epidemiological comments
 An intensive surveillance system is in place for all poultry farms, poultry markets and pet bird shops in Hong Kong. The H5N1 infected wild birds were detected in ongoing surveillance programme on wild birds. The dates of the outbreaks concerning wild birds ended are the same as the dates the birds were collected (i.e. 17 December 2011, 30 December 2011 & 1 January 2012 respectively).
 A total of 19,451 poultry, including 15,569 chickens, 810 pigeons, 1,950 pheasants and 1,122 silky fowls were culled in the Cheung Sha Wan Temporary Wholesale Poultry Market on 21 December 2011. Importation of live poultry and movement of poultry in local farms is banned for 21 days. Surveillance and monitoring of local chicken farms has been stepped up. So far, no H5 virus was detected in samples taken from the 30 chicken farms in Hong Kong.

Source of the outbreak(s) or origin of infection • Unknown or inconclusive
